Modeling of Vocational Excellence: A case study with Finnish Air Traffic Controllers

Period: 10 Sep 2013

Petri Nokelainen (Speaker)

Teaching and Learning Services

Description

Pylväs Laura, Roisko Hilikka Format of Presentation: Paper Alternative EERA Network: 01. Continuing Professional Development: Learning for Individuals, Leaders, and Organisations Topics: NW 02: Work-based learning, partnership of learning venues (e.g. research on apprenticeships) Keywords: professional expertise, vocational training, vocational excellence, air traffic controller Modeling of Vocational Excellence: A case study with Finnish Air Traffic Controllers Laura Pylväs, Petri Nokelainen, Hilikka Roisko University of Tampere, Finland Presenting Author: Pylväs, Laura; Nokelainen, Petri Flight traffic has been steadily increasing during the past ten years. The airline industry has rapidly changed from a market with state-owned airlines to a market for global low cost airlines. Thousands of flights around the world are growing the density in airports making the air traffic even more complex system to manage. Levels of requirements in air traffic controllers' (ATCO) working field are increasing and setting new expectations for learning. The European CCC (Common Core Content) currently defines the issues that must be learned in European ATCO training despite what kind of pedagogy, learning methods etc. are used. At all levels of air traffic management, there is a need for an integrated model for organizational learning (Teperi and Leppänen, 2010). Human factors, such as personnel development, training and competence, as well as employee commitment and well-being, require more research and development (e.g., Rymin et

al., 2011). Nokelainen and his colleagues have studied vocational excellence in the context of mathematics (Finnish and US Academic Olympiad teams, see, e.g., Nokelainen et al., 2007; Nokelainen and Tirri, 2010) and manual skills (Finnish World Skills Competition team, see, e.g., Nokelainen, 2010; Nokelainen, Korpelainen & Ruohotie, 2009). The model of vocational excellence utilizes Gagné's (2004, 2010) Differentiated Model of Giftedness and Talent (DMGT) that distinguishes the two usually intertwined concepts of giftedness and talent. As the role of natural abilities in talent development is stressed in DMGT, we have operationalized them using Gardner's (1983, 1993) Multiple Intelligence (MI) theory: 1) Linguistic; 2) Logical-mathematical; 3) Musical; 4) Spatial; 5) Bodily-kinesthetic; 6) Interpersonal; 7) Intrapersonal intelligence (for details, see, Tirri & Nokelainen, 2011).

The role of Finnish WorldSkills Competition Participants' Natural Abilities, Intrinsic Characteristics, and Extrinsic Conditions to Their Vocational Talent Development

Period: 10 Sep 2013

Petri Nokelainen (Speaker)

Teaching and Learning Services

Description

Pylväs Laura Format of Presentation: Paper Alternative EERA Network: 01. Continuing Professional Development: Learning for Individuals, Leaders, and Organisations Topics: NW 02: Work-based learning, partnership of learning venues (e.g. research on apprenticeships) Keywords: vocational education, career and technical education, expertise, excellence, characteristics, skills competitions The role of Finnish WorldSkills Competition Participants' Natural Abilities, Intrinsic Characteristics, and Extrinsic Conditions to Their Vocational Talent Development Petri Nokelainen, Laura Pylväs University of Tampere, Finland Since 70's, vocational career path has been 'the second choice' for the most Finnish young people. Traditional vocations, such as cook or plumber, were not holding a high status when compared to academic professions. Also the quality of vocational education and training (VET) was deemed to be low. Also European Commission has stated in several occasions, most lately in the 2011-2020 VET development plan that right skills are needed as labour market requirements are changing rapidly (EC, 2010). According to the document (p.9), one viable strategy is to "organise activities aimed at promoting VET attractiveness and excellence, which may include campaigns and skills competitions." EC supported the first European Skills Competition (EuroSkills) in vocational education and training in the Netherlands in 2008. Over 400 competitors from 29 countries and nearly 27000 visitors participated in the event. The second EuroSkills in Lisbon in 2010 was also supported by EC, attracting now over 60000 visitors. Also WorldSkills competitions are gaining increasing interest around the world. When United Kingdom hosted the last WorldSkills Competition in London in 2011, more than 220 000 visitors watched 950 international competitors from 52 countries working for four days on 46 skill categories. In this paper, we investigate the role of natural abilities (MI theory), intrinsic characteristics (self-regulation), and extrinsic conditions (domain and non-domain related factors) to the talent development of young Finnish individuals who participate in international skills competitions. Further, we investigate whether these characteristics of the most and least successful competitors differ.
