

A comparison between joint regression analysis and the AMMI model
A case study with barley

Active scanner control on paper machines

Adaptive autoregressive model for reduction of noise in SPECT

Ageing first passage time density in continuous time random walks and quenched energy landscapes

A hybrid optimization grey model based on segmented gra and multi-strategy contest for short-term power load forecasting

A Hybrid Task Graph Scheduler for High Performance Image Processing Workflows

Algorithmic computation of knot polynomials of secondary structure elements of proteins

ALMARVI System Solution for Image and Video Processing in Healthcare, Surveillance and Mobile Applications

Analysis of common rail pressure signal of dual-fuel large industrial engine for identification of injection duration of pilot diesel injectors

Analysis of the damping characteristics of two power electronics-based devices using 'individual channel analysis and design'

A prospect for computing in porous materials research
Very large fluid flow simulations

Assessment of mutation probabilities of KRAS G12 missense mutants and their long-timescale dynamics by atomistic molecular simulations and Markov state modeling

Atomistic fingerprint of hyaluronan-CD44 binding

Automatic hierarchical discovery of quasi-static schedules of RVC-CAL dataflow programs

Automatic word count estimation from daylong child-centered recordings in various language environments using language-independent syllabification of speech

Comb Model with Slow and Ultraslow Diffusion

Concerted regulation of npc2 binding to endosomal/lysosomal membranes by bis(monoacylglycero)phosphate and sphingomyelin

Conformational properties of complex polymers
Rosette versus star-like structures

Continuum approach to high-cycle fatigue. The finite life-time case with stochastic stress history

Cuts for 3-D magnetic scalar potentials
Visualizing unintuitive surfaces arising from trivial knots

Data augmentation approaches for improving animal audio classification

Data Flow Algorithms for Processors with Vector Extensions
Handling Actors With Internal State

Design Flow for GPU and Multicore Execution of Dynamic Dataflow Programs

Development of an England-wide indoor overheating and air pollution model using artificial neural networks

Digital Predistortion for 5G Small Cell
GPU Implementation and RF Measurements

Distant speech separation using predicted time-frequency masks from spatial features

Effect of paint baking treatment on the properties of press hardened boron steels

Enhanced multiaxial fatigue criterion that considers stress gradient effects

Entropy analysis of word-length series of natural language texts
Effects of text language and genre

Exploiting statically schedulable regions in dataflow programs

Harnessing the complexity of gene expression data from cancer
From single gene to structural pathway methods

Hermitian one-particle density matrix through a semiclassical gradient expansion

Hierarchical coordination of periodic genes in the cell cycle of *Saccharomyces cerevisiae*

Hysteresis and eddy-current losses in electrical steel utilising edge degradation due to cutting effects

IEEE 802.11ac MIMO Transceiver Baseband Processing on a VLIW Processor

Implementation of a direct procedure for critical point computations using preconditioned iterative solvers

Implementation of a Multirate Resampler for Multi-carrier Systems on GPUs

Inferring the conservative causal core of gene regulatory networks

Influence of relative humidity and physical load during storage on dustiness of inorganic nanomaterials
implications for testing and risk assessment

Influence of specimen type and reinforcement on measured tension-tension fatigue life of unidirectional GFRP laminates

Information processing in the transcriptional regulatory network of yeast
Functional robustness

Instrumentation-Driven Validation of Dataflow Applications

Integration of dataflow-based heterogeneous multiprocessor scheduling techniques in GNU radio

Iterative and Participative Axiomatic Design Process in complex mechanical assemblies
case study on fusion engineering

Local network-based measures to assess the inferability of different regulatory networks

Mapping parameterized cyclo-static dataflow graphs onto configurable hardware

Model-Based Dynamic Scheduling for Multicore Signal Processing

Networks for systems biology
Conceptual connection of data and function

On the effect of deformation twinning and microstructure to strain hardening of high manganese austenitic steel 3D
microstructure aggregates at large strains

Optimization of Flexible Filter Banks Based on Fast Convolution

Organizational structure and the periphery of the gene regulatory network in B-cell lymphoma.

Overview of the MPEG reconfigurable video coding framework

Parallel Digital Predistortion Design on Mobile GPU and Embedded Multicore CPU for Mobile Transmitters

Parameterized scheduling of topological patterns in signal processing dataflow graphs

Pathway analysis of expression data
Deciphering functional building blocks of complex diseases

Pneumatic unidirectional cell stretching device for mechanobiological studies of cardiomyocytes

Possible structures of nonstoichiometric tin oxide
The composition Sn_2O_3

Power Mitigation by Performance Equalization in a Heterogeneous Reconfigurable Multicore Architecture

PRBS-based loop gain identification and output impedance shaping in DC microgrid power converters

Preoperative simulation for the planning of microsurgical clipping of intracranial aneurysms

Properties of graph distance measures by means of discrete inequalities

Quantifying the non-ergodicity of scaled Brownian motion

Quasi-static scheduling of CAL actor networks for reconfigurable video coding

Reduced level of docosahexaenoic acid shifts GPCR neuroreceptors to less ordered membrane regions

Search reliability and search efficiency of combined Lévy-Brownian motion
Long relocations mingled with thorough local exploration

Spectral modeling of time series with missing data

Structural influence of gene networks on their inference
Analysis of C3NET

Target tracking via combination of particle filter and optimisation techniques

The Fisher-Snedecor F Distribution
A Simple and Accurate Composite Fading Model

Topological patterns for scalable representation and analysis of dataflow graphs

Toward Efficient Execution of RVC-CAL Dataflow Programs on Multicore Platforms

Towards generic embedded multiprocessing for RVC-CAL dataflow programs

Urothelial cancer gene regulatory networks inferred from large-scale RNAseq, Bead and Oligo gene expression data

Using building simulation to model the drying of flooded building archetypes

Vehicle Attribute Recognition by Appearance
Computer Vision Methods for Vehicle Type, Make and Model Classification

Very sharp diffraction peak in nonglass-forming liquid with the formation of distorted tetraclusters

Workplace performance of a loose-fitting powered air purifying respirator during nanoparticle synthesis

A simulation case study of production planning and control in printed wiring board manufacturing

Model for evaluating additive manufacturing feasibility in end-use production

Guest Editorial
