Looking for a five-legged sheep  
Identifying enterprise architects' skills and competencies

Toward efficient many-core scheduling of partial expansion graphs

Preface

Special Issue on 'New Hydraulic Components for Tough Robots'

On the Definition of Microservice Bad Smells

Backshoring of production in the context of a small and open Nordic economy

Towards secure cloud orchestration for multi-cloud deployments

Ripple thermostat

Affecting the emotional experience through interactive force feedback and shape change

A design tool for high performance image processing on multicore platforms

Deep multiresolution color constancy

A multi-agent approach for processing industrial enterprise data

An approach to production scheduling optimization a case of an oil lubrication and hydraulic systems manufacturer

Configuring and visualizing the data resources in a cloud-based data collection framework

Exploiting suppliers' potential in construction innovations

Memory-Constrained vectorization and scheduling of dataflow graphs for hybrid CPU-GPU platforms

Feature synthesis for image classification and retrieval via one-against-all perceptrons

A Dataset for Camera Independent Color Constancy

An algebraic approach to reducing the number of variables of incompletely defined discrete functions

Architectural patterns for microservices

A systematic mapping study

Blind estimation of white Gaussian noise variance in highly textured images

Combined local and global image enhancement algorithm

Compression of signs of DCT coefficients for additional lossless compression of JPEG images

Conversion of sparsely-captured light field into alias-free fullparallax multiview content

Deep p-Fibonacci scattering networks

Fair testing and stubborn sets

Federated IoT services leveraging 5G technologies at the edge

How to design gamification? A method for engineering gamified software

Information Exchange Architecture for Collaborative Industrial Ecosystem

Information models and information exchange in plant-wide monitoring and control of industrial processes

Is Texture Denoising Efficiency Predictable?

Making the cloud work for software producers  
Linking architecture, operating cost and revenue

Memory Tampering Attack on Binary GCD Based Inversion Algorithms

Methods and tools for denoising of complex-valued images based on block-matching and high order singular value decomposition

Mixed-integer linear programming approach for global discrete sizing optimization of frame structures

Modeling and estimation of signal-dependent and correlated noise

Multisensor Time–Frequency Signal Processing MATLAB package  
An analysis tool for multichannel non-stationary data

Multi-view predictive latent space learning

On the degeneracy of the Randić entropy and related graph measures

Probabilistic saliency estimation

Reduction of variables of index generation functions using linear and quadratic transformations

Robust linearized combined metrics of image visual quality

Time-of-Flight Range Measurement in Low-sensing Environment  
Noise Analysis and Complex-domain Non-local Denoising

How developers perceive smells in source code  
A replicated study

Multilinear class-specific discriminant analysis

Quantitative Graph Theory  
A new branch of graph theory and network science

Sparse approximations in complex domain based on BM3D modeling

Multi-factor authentication for wearables  
Configuring system parameters with risk function

Big Media Data Analysis

Gamified crowdsourcing  
Conceptualization, literature review, and future agenda

Highly unique network descriptors based on the roots of the permanent polynomial

Predicting academic success based on learning material usage

Architecting liquid software

Comparison of time metrics in programming

Hardware design methodology using lightweight dataflow and its integration with low power techniques

Multi-robot active information gathering with periodic communication

Robustifying correspondence based 6D object pose estimation

A convolutional neural network approach for acoustic scene classification

Analyzing Forty years of software maintenance models

Class-specific kernel discriminant analysis based on Cholesky decomposition

DevOps in regulated software development  
Case medical devices

Generalized model of biological neural networks  
Progressive operational perceptrons

Running software research programs  
An agile approach

Using and collecting fine-grained usage data to improve online learning materials

Children designing videos  
Tools, pedagogical models, and best practices for digital storytelling and media-making in the classroom

Barriers for bridging interpersonal gaps  
Three inspirational design patterns for increasing collocated social interaction

A k-nearest neighbor multilabel ranking algorithm with application to content-based image retrieval

An accumulative fusion architecture for discriminating people and vehicles using acoustic and seismic signals

Inband full-duplex radio access system with self-backhauling  
Transmit power minimization under QOS requirements

Reduced-complexity digital predistortion for massive MIMO

Comparing communication effort within the scrum, scrum with Kanban, XP, and Banana development processes

Operationalizing the experience factory for effort estimation in agile processes

Microservices in agile software development  
A workshop-based study into issues, advantages, and disadvantages

Comparing the Built-In Application Architecture Models in the Web Browser

Effects of extrinsic noise are promoter kinetics dependent

Preventing keystroke based identification in open data sets

On continuous deployment maturity in customer projects

User generated soundscapes activating museum visitors

A Mixed Finite Element Method to Solve the EEG Forward Problem

Modular audio story platform for museums

Post-deployment data  
A recipe for satisfying knowledge needs in software development?

Stop it, and be stubborn!

BM3D-HVS  
Content-Adaptive denoising for improved visual quality

Data Rate Assessment on L2–L3 CPU Bus and Bus between CPU and RAM in Modern CPUs

From theories to game mechanics  
Developing a game for training rational numbers
