Robotic process automation - Creating value by digitalizing work in the private healthcare?

Ripple thermostat  
Affecting the emotional experience through interactive force feedback and shape change

Revisiting continuous deployment maturity  
A two-year perspective

Reproducible Evaluation of System Efficiency with a Model of Architecture  
From Theory to Practice

Redundancy-based visual tool center point pose estimation for long-reach manipulators

Reduction of variables of index generation functions using linear and quadratic transformations

Reducing the number of unit tests with design by contract

Reduced-complexity digital predistortion for massive MIMO

Recording and analyzing in-browser programming sessions

Real-time online drilling vibration analysis using data mining

Reading on-screen text with gaze-based auto-scrolling

Random Forest Oriented Fast QTBT Frame Partitioning

Railway fastener inspection by real-time machine vision

Quantitative Graph Theory  
A new branch of graph theory and network science

Quality measures for improving technology trees

PyGOP  
A Python library for Generalized Operational Perceptron algorithms

Pure e-learning course in information security

Public and open HEVC encoding service in the cloud

Prototyping real-Time tracking systems on mobile devices

Promoting local culture and enriching airport experiences through interactive storytelling

Programming languages for data-Intensive HPC applications  
A systematic mapping study

Programmable lowpower implementation of the HEVC Adaptive Loop Filter

Process configuration framework tool

Probabilistic saliency estimation

Preventing keystroke based identification in open data sets

Preface  
Special Issue on 'New Hydraulic Components for Tough Robots'

Prediction models and techniques for Open Source Software projects  
A systematic literature review

Predicting OSS trustworthiness on the basis of elementary code assessment

Predicting academic success based on learning material usage

Power mitigation of a heterogeneous multicore architecture on FPGA/ASIC by DFS/DVFS techniques

Power harvesting from microwave oven electromagnetic leakage

Power allocation in multi-node cooperative network in Rician fading channels

Post-deployment data

A recipe for satisfying knowledge needs in software development?

Phase masks optimization for broadband diffractive imaging

Performance evaluation of bandwidth reservation for mmWave 5G NR systems

Performance analysis of single-query 6-DoF camera pose estimation in self-driving setups

Peer to Peer Offloading with Delayed Feedback

An Adversary Bandit Approach

Patterns for subsidiaries as innovation tools

Patterns for serverless functions (Function-as-a-Service)

A multivocal literature review

Patterns for safety system bus architecture

Patterns for controlling chaos in a startup

Participatory development of user experience design guidelines for a B2B company

Parameterized scheduling for signal processing systems using topological patterns

PaaSword

A holistic data privacy and security by design framework for cloud services

Optimizing spatial and temporal reuse in wireless networks by decentralized partially observable markov decision processes

Optimizing gaze direction in a visual navigation task

Optimized viewport dependent streaming of stereoscopic omnidirectional video

Optimization equivalence of divergences improves neighbor embedding

Optimal sensing via multi-armed bandit relaxations in mixed observability domains

Optimal neighborhood preserving visualization by Maximum satisfiability

Opportunities and Challenges of Mobile Applications as "Tickets-to-Talk": A Scenario-Based User Study  
Julkaisun otsikon käännös: : Opportunities and Challenges of Mobile Applications as "Tickets-to-Talk": A Scenario-Based User Study
