

Guest editorial special issue on the internet of nano things

Introduction to the Special Section on Sound Scene and Event Analysis

Actor Merging for Dataflow Process Networks

Adaptive Randomized Coordinate Descent for Sparse Systems
Lasso and Greedy Algorithms

Adaptive sampling for compressed sensing based image compression

Adaptive tracking of people and vehicles using mobile platforms

A fast universal self-tuned sampler within Gibbs sampling

A Hybrid Task Graph Scheduler for High Performance Image Processing Workflows

ALMARVI System Solution for Image and Video Processing in Healthcare, Surveillance and Mobile Applications

Analysis of common rail pressure signal of dual-fuel large industrial engine for identification of injection duration of pilot diesel injectors

Analytical model in discrete time for cross-layer video communication over LTE

An approval of MPPT based on pv cell's simplified equivalent circuit during fast-shading conditions

A New Approach to Sign-Bit-Based Parameter Estimation in OFDM Receivers

A software tool for studying the size and shape of human cardiomyocytes

Automated design of networks of transport-triggered architecture processors using dynamic dataflow programs

Automatic hierarchical discovery of quasi-static schedules of RVC-CAL dataflow programs

A Wideband Front-End Receiver Implementation on GPUs

Bayesian receiver operating characteristic metric for linear classifiers

Benchmark database for fine-grained image classification of benthic macroinvertebrates

Binary Non-Negative Matrix Deconvolution for Audio Dictionary Learning

Binomial Gaussian mixture filter

Blind Separation of Audio Mixtures Through Nonnegative Tensor Factorization of Modulation Spectrograms

Cascade of Boolean detector combinations

Class-Specific Reference Discriminant Analysis With Application in Human Behavior Analysis

Compressive Detection of Random Subspace Signals

Compressive sensed video recovery via iterative thresholding with random transforms

Convolutional low-resolution fine-grained classification

Coupled dictionaries for exemplar-based speech enhancement and automatic speech recognition

Damped Posterior Linearization Filter

Data Flow Algorithms for Processors with Vector Extensions
Handling Actors With Internal State

Data Rate Assessment on L2–L3 CPU Bus and Bus between CPU and RAM in Modern CPUs

Deep Learning Case Study for Automatic Bird Identification

Deep Learning for Audio Signal Processing

Delay-Accuracy Trade-off in Opportunistic Time-of-Arrival Localization

Design and implementation of a multi-sensor newborn EEG seizure and background model with inter-channel field characterization

Design and synthesis for multimedia systems using the targeted dataflow interchange format

Design Flow for GPU and Multicore Execution of Dynamic Dataflow Programs

Detection and Classification of Acoustic Scenes and Events
Outcome of the DCASE 2016 Challenge

Digital correction of frequency response mismatches in 2-channel time-interleaved ADCs using adaptive I/Q signal processing

Digital Predistortion for 5G Small Cell
GPU Implementation and RF Measurements

Digital Predistortion for Hybrid MIMO Transmitters

Digital Predistortion for Multiuser Hybrid MIMO at mmWaves

Dimensionality reduction for data visualization

Discriminant Bag of Words based representation for human action recognition

Dominant Rotated Local Binary Patterns (DRLBP) for texture classification

Dynamic action recognition based on dynemes and Extreme Learning Machine

Efficiency of texture image filtering and its prediction

Energy cooperation for throughput optimization based on save-then-transmit protocol in wireless communication system

Ensembles of dense and dense sampling descriptors for the HEP-2 cells classification problem

Entropy and Channel Capacity under Optimum Power and Rate Adaptation over Generalized Fading Conditions

Estimation and Mitigation of Channel Non-Reciprocity in Massive MIMO

Exploiting statically schedulable regions in dataflow programs

Forward simulation and inverse dipole localization with the lowest order Raviart - Thomas elements for electroencephalography

Functional electrical stimulation for facial pacing
Effects of waveforms on movement intensity and ratings of discomfort

Fusion enhancement for tracking of respiratory rate through intrinsic mode functions in photoplethysmography

Gaussian mixture models for signal mapping and positioning

Generalization of the K-SVD algorithm for minimization of β -divergence

Generalized Hampel Filters

Generative part-based Gabor object detector

IEEE 802.11ac MIMO Transceiver Baseband Processing on a VLIW Processor

Image database TID2013
Peculiarities, results and perspectives

Image interpolation based on non-local geometric similarities and directional gradients

Implementation of a high-throughput low-latency polyphase channelizer on GPUs Design and Architectures for Signal and Image Processing 2008

Implementation of a Multirate Resampler for Multi-carrier Systems on GPUs

Importance of maintenance data quality in extended warranty simulation

Instrumentation-Driven Validation of Dataflow Applications

Integration of dataflow-based heterogeneous multiprocessor scheduling techniques in GNU radio

Kalman filter with a linear state model for PDR+WLAN positioning and its application to assisting a particle filter

Kernel reference discriminant analysis

Mapping parameterized cyclo-static dataflow graphs onto configurable hardware

Minimum description length sparse modeling and region merging for lossless plenoptic image compression

Model-Based Dynamic Scheduling for Multicore Signal Processing

Model selection for linear classifiers using Bayesian error estimation

Multilinear class-specific discriminant analysis

Multimodal subspace support vector data description

Multiresolution analysis for compactly supported interpolating tensor product wavelets

Multi-view action recognition based on action volumes, fuzzy distances and cluster discriminant analysis

Multi-view predictive latent space learning

Neighborhood Matching for Image Retrieval

Nonlocality-Reinforced Convolutional Neural Networks for Image Denoising

Non-negative tensor factorization models for Bayesian audio processing

Nyström-based approximate kernel subspace learning

Online Spectrogram Inversion for Low-Latency Audio Source Separation

Online tests of Kalman filter consistency

On the existence of the solution for one-dimensional discrete phase retrieval problem

On the kernel Extreme Learning Machine classifier

Optimization of Flexible Filter Banks Based on Fast Convolution

Overview of the MPEG reconfigurable video coding framework

Parallel Digital Predistortion Design on Mobile GPU and Embedded Multicore CPU for Mobile Transmitters

Parameterized scheduling of topological patterns in signal processing dataflow graphs

Passive wireless antenna sensor for strain and crack sensing - Electromagnetic modeling, simulation, and testing

Performance analysis of single-query 6-DoF camera pose estimation in self-driving setups

Power Mitigation by Performance Equalization in a Heterogeneous Reconfigurable Multicore Architecture

Probabilistic saliency estimation

Quasi-static scheduling of CAL actor networks for reconfigurable video coding

Robust Inference for State-Space Models with Skewed Measurement Noise

Rotation Invariant Texture Description Using Symmetric Dense Microblock Difference

Self-Supervised Light Field Reconstruction Using Shearlet Transform and Cycle Consistency

Separation of Moving Sound Sources Using Multichannel NMF and Acoustic Tracking

Skew-t Filter and Smoother with Improved Covariance Matrix Approximation

Smart home gateway system over Bluetooth low energy with wireless energy transfer capability

Socially inspired relaying and proactive mode selection in mmWave vehicular communications

Solutions to integrals involving the marcum Q-function and applications

Sparse approximations in complex domain based on BM3D modeling

Sparse extreme learning machine classifier exploiting intrinsic graphs

Sparse Overcomplete Denoising
Aggregation Versus Global Optimization

Sparse phase imaging based on complex domain nonlocal BM3D techniques

Spectrum Sensing under RF Non-Linearities
Performance Analysis and DSP-Enhanced Receivers

Stabilization to trajectories for parabolic equations

State Estimation for a Class of Piecewise Affine State-Space Models

Statistical analysis of interference for nanoscale electromechanical wireless communication at VHF-band

Still image/video frame lossy compression providing a desired visual quality

Subjective evaluation of Super Multi-View compressed contents on high-end light-field 3D displays

Summarization of User-Generated Sports Video by Using Deep Action Recognition Features

Topological patterns for scalable representation and analysis of dataflow graphs

Toward Efficient Execution of RVC-CAL Dataflow Programs on Multicore Platforms

Towards generic embedded multiprocessing for RVC-CAL dataflow programs

Unbiased Injection of Signal-Dependent Noise in Variance-Stabilized Range

Using multi-step proposal distribution for improved MCMC convergence in Bayesian network structure learning

Variance Stabilization for Noisy+Estimate Combination in Iterative Poisson Denoising

Vehicle Attribute Recognition by Appearance

Computer Vision Methods for Vehicle Type, Make and Model Classification

Video coding of dynamic 3D point cloud data

Visual Voice Activity Detection in the Wild

Which wavelength is the best for arterial pulse waveform extraction using laser speckle imaging?

Guest Editorial

Implementation Issues in System-on-Chip

Guest Editorial Special Issue on Multimedia Big Data in Internet of Things

Big Media Data Analysis

Data-driven study of synchronous population activity in generic spiking neuronal networks: How much do we capture using the minimal model for the considered phenomena?

Data-driven stream mining systems for computer vision

Modeling and estimation of signal-dependent and correlated noise

1-D Convolutional Neural Networks for Signal Processing Applications

2D Video Coding of Volumetric Video Data

360-Degree video streaming and its subjective quality

3D/inkjet-printed origami antennas for multi-direction RF harvesting

5G new radio evolution towards sub-THz communications

Accurate depth estimation from a sequence of monocular images supported by proprioceptive sensors

Acoustic scene classification
An overview of dcase 2017 challenge entries

Adaptive Normalization for Forecasting Limit Order Book Data Using Convolutional Neural Networks

Additively manufactured multilayer high performance RF passive components on cellulose substrates for internet-of-things electronic circuits

Adjusting university education with workspace training and self-education

Advanced architectures for self-interference cancellation in full-duplex radios
Algorithms and measurements

A flexible hybrid printed RF energy harvester utilizing catalyst-based copper printing technologies for far-field RF energy harvesting applications

A joint target localization and classification framework for sensor networks

A k-nearest neighbor multilabel ranking algorithm with application to content-based image retrieval

Ambient energy harvesting from a two-way talk radio for flexible wearable devices utilizing inkjet printing masking

An accumulative fusion architecture for discriminating people and vehicles using acoustic and seismic signals

An active learning method using clustering and committee-based sample selection for sound event classification

Analog Mitigation of Frequency-Modulated Interference for Improved GNSS Reception

Analysis of multipath propagation for 5G system at higher frequencies in microcellular environment

An efficient GPU implementation of an arbitrary resampling polyphase channelizer

Angular wall loss model and Extended Building Penetration model for outdoor to indoor propagation

An image guided treatment platform for prostate cancer photodynamic therapy

Anisotropic Spatiotemporal Regularization in Compressive Video Recovery by Adaptively Modeling the Residual Errors as Correlated Noise

An optimized embedded target detection system using acoustic and seismic sensors

An Unsupervised Audio Segmentation Method Using Bayesian Information Criterion

Julkaisun otsikon käännös: : An Unsupervised Audio Segmentation Method Using Bayesian Information Criterion

A perspective on wireless M-bus for smart electricity grids

Application-specific instruction processor for extracting local binary patterns

A system-level design approach for dynamic resource coordination and energy optimization in sensor network platforms

Automatic detection of water inside concrete slabs using ground penetrating radar

Automatic objective thresholding to detect neuronal action potentials

Automatic synthesis of TTA processor networks from RVC-CAL dataflow programs

Blind estimation of mixed noise parameters in images using robust regression curve fitting

Blind sub-Nyquist GNSS signal detection

BL-LDA

Bringing bigram to supervised topic model

BM3D image denoising using heterogeneous computing platforms

Circularly Polarized Corner-Truncated and Slotted Microstrip Patch Antenna on Textile Substrate for Wearable Passive UHF RFID Tags

Classification of iPSC colony images using hierarchical strategies with support vector machines

Closed-Loop DPD for Digital MIMO Transmitters under Antenna Crosstalk

Collaborative filtering based on group coordinates for smoothing and directional sharpening

Color-distribution similarity by information theoretic divergence for color images

Compact modeling and management of reconfiguration in digital channelizer implementation

Comparing capacity gains of static and UAV-based millimeter-wave relays in clustered deployments

Compressed video quality assessment with modified MSE

Computational modeling of growth in cortical cultures using the NETMORPH simulation tool

Julkaisun otsikon käännös: : Computational modeling of growth in cortical cultures using the NETMORPH simulation tool

Computational tools for assessing the properties of 2D neural cell cultures

Computer vision aided navigation systems

Configurable, resource-optimized FFT architecture for OFDM communication

Constrained PSK

Energy-efficient modulation for Sub-THz systems

Convergence analysis of error-reduction algorithm for solving of the extended one-dimensional discrete phase retrieval problem

Convex Energy Optimization of Streaming Applications for MPSoCs

Coordinating proactive social devices in a mobile cloud

Lessons learned and a way forward

Cosparsity dictionary learning for the orthogonal case

Data Clustering Based on Community Structure in Mutual k-Nearest Neighbor Graph

Data flow algorithms for processors with vector extensions

Handling actors with internal state

DBComposer

An R package for integrative analysis and management of gene expression microarray data

Deep multiresolution color constancy

Deep neural network based speech separation optimizing an objective estimator of intelligibility for low latency applications

Deep Reinforcement Learning for Financial Trading Using Price Trailing

Deep Temporal Logistic Bag-of-features for Forecasting High Frequency Limit Order Book Time Series

Design space exploration and implementation of RVC-CAL applications using the TURNUS framework

Digital full-band linearization of wideband direct-conversion receiver for radar and communications applications

Dynamic action classification based on iterative data selection and Feedforward Neural networks

Dynamic, data-driven spectrum management in cognitive small cell networks

Effects of local structure of neuronal networks on spiking activity in silico

Effects of structure on spontaneous activity in simulated neuronal networks

Efficient optimization for data visualization as an information retrieval task

Efficient Solving of Markov Decision Processes on GPUs Using Parallelized Sparse Matrices

Eigen Posture Based Fall Risk Assessment System Using Kinect

Emergence of global and local structural features during development of neuronal networks

Energy Detection-Based Spectrum Sensing over Fisher-Snedecor F Fading Channels

Enhancing class discrimination in Kernel Discriminant Analysis

Estimation of time-varying room impulse responses of multiple sound sources from observed mixture and isolated source signals

Exemplar-based speech enhancement for deep neural network based automatic speech recognition

Exploiting Multipath Terahertz Communications for Physical Layer Security in beyond 5G Networks

Exploiting subclass information in one-class support vector machine for video summarization

Fast fourier color constancy and grayness index for ISPA illumination estimation challenge

Full-duplex radio technology for simultaneously detecting and preventing improvised explosive device activation

Full search equivalent fast block matching using orthonormal tree-structured haar transform

Gamified coding

Toy robots and playful learning in early education

GPU-based acceleration of symbol timing recovery

GPU parallel implementation of the approximate K-SVD algorithm using OpenCL

Headband Antenna for Wireless Power Transfer to Millimeter-Sized Neural Implants with Minimal Misalignment Effects

HEVC-compliant viewport-adaptive streaming of stereoscopic panoramic video

High-performance programs by source-level merging of RVC-CAL dataflow actors

Human action recognition in stereoscopic videos based on bag of features and disparity pyramids

Identification of Parkinson's Disease Utilizing a Single Self-recorded 20-step Walking Test Acquired by Smartphone's Inertial Measurement Unit

Impact of received signal on self-interference channel estimation and achievable rates in in-band full-duplex transceivers

Improved image quality in fast inpainting with omnidirectional filling

Improved Session Continuity in 5G NR with Joint Use of Multi-Connectivity and Guard Bandwidth

Improvement of GPS and BeiDou extended orbit predictions with CNNs

Inband full-duplex radio access system with self-backhauling
Transmit power minimization under QOS requirements

Inertial Odometry on Handheld Smartphones

Influences of digital band-pass filtering on the BCG waveform

Innovative e-Tourism Services on Top of Geo2Tag LBS Platform

Input magnitude data setting in error-reduction algorithm for one-dimensional discrete phase retrieval problem

Just-in-time scheduling techniques for multicore signal processing systems

Lossless compression of high resolution disparity map images

Lossless compression of regions-of-interest from retinal images

Lossy-to-lossless progressive coding of depth-maps

LoTTA: Energy-Efficient Processor for Always-on Applications

Low-complexity robust DOA estimation

Low-energy graph fourier basis functions span salient objects

Low-latency Deep Clustering for Speech Separation

Low-Latency Sound-Source-Separation using Non-Negative Matrix Factorisation with Coupled Analysis and Synthesis Dictionaries

Low power design methodology for signal processing systems using lightweight dataflow techniques

Measurements of Reflection and Penetration Losses in Low Terahertz Band Vehicular Communications

Minimum Variance Extreme Learning Machine for human action recognition

MOBILE3DTV

Content delivery optimization over DVB-H system

Model-based dynamic scheduling for multicore implementation of image processing systems

Model-based precision analysis and optimization for digital signal processors

Modeling and Mitigating 5G Wireless Downlink Interferences for Low-altitude Aerial vehicles

Modeling and optimization of dynamic signal processing in resource-aware sensor networks

Models of architecture

Reproducible efficiency evaluation for signal processing systems

Multichannel NMF for source separation with ambisonic signals

Multidimensional dataflow graph modeling and mapping for efficient GPU implementation

Multiplicative update for fast optimization of information retrieval based neighbor embedding

Multi-source localization using a DOA Kernel based spatial covariance model and complex nonnegative matrix factorization

Multi-view human action recognition: A survey

NT-SIM

A co-simulator for networked signal processing applications

On application of rational Discrete Short Time Fourier Transform in epileptic seizure classification

Julkaisun otsikon käännös: : On Application of Rational Discrete Short Time Fourier transform in Epileptic seizure Classification

On delay distribution in IEEE 802.11 wireless networks

On prediction of DCT-based denoising efficiency under spatially correlated noise conditions

On Renyi's entropy estimation with one-dimensional Gaussian kernels

On the effect of network structure and synaptic mechanisms on sustained bursting activity

On the performance of narrow-band internet of things (NB-IoT) for delay-tolerant services

OpenCL Programmable Exposed Datapath High Performance Low-Power Image Signal Processor

Open framework for mammography-based breast cancer risk assessment

Optimized wake-up scheme with bounded delay for energy-efficient MTC

Parameterized core functional dataflow graphs and their application to design and implementation of wireless communication systems

Parameterized scheduling for signal processing systems using topological patterns

Parametric exploration of cellular swelling in a computational model of cortical spreading depression

Partial expansion of dataflow graphs for resource-aware scheduling of multicore signal processing systems
