

Supplementary material for "Effects of percutaneous transluminal angioplasty of superficial femoral artery on photoplethysmographic pulse transit times"

April 30, 2018

Supplementary Figure 1: Distributions of the absolute ECG-PTTs for 2nd toe. T_b = treated lower limb before the operation, T_a = treated lower limb immediately after the operation, T_f = treated lower limb at follow-up visit, N_b = non-treated lower limb before the operation, N_a = non-treated lower limb after the operation, N_f = non-treated lower limb (at follow-up visit, C = at least 65-year-old control subjects, M = middle-aged subjects, Y = young subjects).

Supplementary Figure 2: Distributions of the absolute finger-toe PTTs. T_b = treated lower limb before the operation, T_a = treated lower limb immediately after the operation, T_f = treated lower limb at follow-up visit, N_b = non-treated lower limb before the operation, N_a = non-treated lower limb after the operation, N_f = non-treated lower limb at follow-up visit, C = at least 65-year-old control subjects, M = middle-aged subjects, Y = young subjects.
