Tribologia – Finnish Journal of Tribology

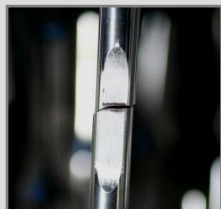

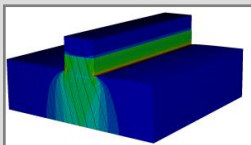

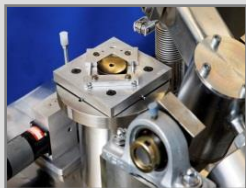

Tribology is the **multidisciplinary science of surfaces in relative motion**. There is an enormous number of tribo-contacts in everyday life, for example in human body as well as in industrial machines and engines.

From an economical point of view the control of friction and wear has a high impact on energy, material and resource efficiency.

The scope of Tribologia – Finnish Journal of Tribology is to publish new interesting results of tribology and tribology related research. The journal is **open access** and published by The Finnish Society for Tribology. It has a Finnish editorial board and a Nordic advisory board.

We look forward to receiving high quality **scientific articles (experimental and modelling) by scientists from all backgrounds. The articles are peer reviewed before publishing.**
